

miRadar™ 8-EV Evaluation Kit

The *miRadar 8-EV/EV2* evaluation kit includes the *miRadar 8* module and evaluation software, which allows experiments to be conducted rapidly and easily in the field.

miRadar 8-EV evaluation kit (tablet version)

miRadar 8-EV (B204-01-EV)

**Evaluation software (Standard Version)
(B204-SW002)**

Accessories: Instructions
USB cable

This evaluation kit is for those using radar for the first time. Evaluation software (Standard Version) has been installed in the attached tablet PC, and its functions can be checked quickly. The software allows images and radar detection signals to be recorded and played simultaneously.

miRadar 8-EV2 evaluation kit

miRadar 8-EV2 (B204-01-EV2)

**Evaluation software (Standard Version)
(B204-SW002)**

Accessories: Instructions
USB cable

This evaluation kit is for users who accurately validate radar functions or are using radar for the first time. The functions can be checked after installing the evaluation software (Standard Version) from an attached CD into your Windows PC. The software allows images and radar detection signals to be recorded and played simultaneously. Signal processing with a high-speed PC allows the target detection cycle to be shortened.

E-mail technical support (one month) (B204-OP100)

Technical support is recommended for those using the evaluation kit for the first time.
